J.K.

Dear Dan:

The recent redetermination of quantities for the Ground Duplicating and Analysis Equipment has indicated the need to amend the present manual quantities for this equipment. We have prepared a sheet recapitulating the manual requirements for this equipment as they exist in the Contract at present, Exhibit A. Additional operational information and a better understanding of your proposed usage suggest certain changes to the types of manuals to be provided as well as quantity. These recommended manual types and quantities are set forth in Exhibit B.

The quantities recommended assume that Requirement No. 1 will cover manuals for Customer No. 2 as has been the case in the past. Operating on this assumption, the 15 copies of manuals for Racks G, H, J, K, and 14-channel system as listed in Amendment 11 for Requirement No. 2 appear to be unnecessary, and therefore have been omitted from our recommendations.

Comparison between the list of present Contract requirements and the list of recommended manuals shows several proposed changes. The G and J racks are each presently scheduled to have an individual manual; but as these racks must always operate together, we recommend one manual covering both racks. The 3-channel system manual will cover the duplicating and analysis processes for Systems 1 and 3 as accomplished with Racks A, B1 and B2, and F. The 14-channel system manual will describe the duplicating and analysis processes for System 4 as accomplished by Racks G, H, J, K, F, L, C, and N. The additional manuals and increased quantity of manuals for Requirement No. 3 are indicated by an asterisk (\*). The recommendations for increase in quantity are necessitated by the increase in quantity of racks. We have recommended that Requirement No. 3 receive 15 each plus one reproducible copy of the manuals for the L, M, and N racks and that the quantities of manuals for the A, B1 and B2, C, E, F, and 3-channel manual be increased to cover the additional racks on order.

As these requested changes involve additional reproduction only and are therefore relatively small in cost, it does not appear necessary to make any change in funding to cover these changes. It is our intention to produce manuals on the revised basis set forth in Exhibit B unless you advise us to proceed differently.

Sincerely,

Bob
